

## Element Project

Be sure to list all references used. You must use at least three different reference sources.

Information to be included:

Element's Atomic Number, name, chemical symbol, element's atomic mass.

What group is the element in? What is the name of the group? Give a description of the group. (what properties do the elements in the group have in common?)

What is the element's abundance?

Where is the element found and how is it obtained?

What are the element's physical properties?

What are the element's chemical properties?

What compounds does the element form?

What are the uses of the element and its compounds?

What is its importance to people?

Are there any dangers when using the element or its compounds?

Poster should include the following

- Slogan for the element
- The element's square/rectangle of the periodic table
- Illustrations of the element and its compounds
- Illustrations showing important uses of the element
